Introduction to Serial Communication - INTEA Automatizacija

Signals are a limited form of inter-process communication (IPC), typically used in Unix, Unix-like, and other POSIX-compliant operating systems. A signal is an asynchronous notification sent to a process or to a specific thread within the same process in order to notify it of an event that occurred. Signals originated in 1970s Bell Labs Unix and have been more recently specified in the POSIX ...

Signal (IPC) - Wikipedia

3 1. Introduction In today's business world, reliable and efficient access to information has become an important asset in the quest to achieve a competitive advantage.
