Structural Dynamics is an extension of the conventional static structural analysis. It is the study of structural analysis that considers the external loads or displacements to vary with time and the structure to respond to them by its stiffness as well as inertia and damping. Newton's 2nd law of motion forms the basic principle of Structural ...

tion is that the structure responds with some repetitive motion that is related to its mechanical properties. By understanding some basic structural models, measures and analysis techniques, it is possible to successfully characterize and treat vibration in structures. Time and Frequency Analysis Structural vibration can be measured by ...
