Resident gut bacteria can affect patient responses to cancer immunotherapy (see the Perspective by Jobin). Routy et al. show that antibiotic consumption is associated with poor response to immunotherapeutic PD-1 blockade. They profiled samples from patients with lung and kidney cancers and found that nonresponding patients had low levels of the bacterium *Akkermansia muciniphila* .

Sato and colleagues established a library of patient-derived pancreas cancer organoids and identified heterogeneous patterns of dependency on Wnt ligands among pancreas cancers. Biological and genetic analyses highlighted GATA6 as a mediator of the Wnt niche requirement, which links pancreatic tumor progression to independence from the stem cell niche.
