The 36th International Workshop on Graph-Theoretic Concepts in Computer Science (WG 2010) took place in Zaros, Crete, Greece, June 28–30, 2010. About 60 mathematicians and computer scientists from all over the world (Australia, Canada, Czech Republic, France, Germany, Greece, Hungary, Israel, Japan, The Netherlands, Norway, Poland, Switzerland, the UK, and the USA) attended the conference.

The papers feature original results on all aspects of graph-theoretic concepts in Computer Science, e.g. structural graph theory, sequential, parallel, and distributed graph and network algorithms and their complexity, graph grammars and graph rewriting systems, graph-based modeling, graph-drawing and layout, diagram methods, and support of these concepts by suitable implementations.

The WG conference traditionally aims at uniting theory and practice by demonstrating how graph-theoretic concepts can be applied to various areas in computer science, or by extracting new problems from applications. The goal is to present recent research results and to identify and explore directions of future research.

theoretic concept of centrality. A graph is simply a two-dimensional structure consisting of spatially distinct points joined by lines (Hage and Harary 1983:3). The Mississippi River drainage can be portrayed readily as a graph, using points to represent river heads and junctions and lines to represent the rivers themselves (Haggett and Chorley 1969).

GRAPH-THEORETIC GENERALIZATION OF CLIQUE CONCEPT 141 and methodological framework. We will return to Alba's work shortly. A second graph theoretic approach, rather than re-defining the graphic structure itself, developed methods for working with valued graphs and in so doing redefined the relations (e.g., Doreian, 1969; Peay, 1974).
