As the cornerstone of holistic physics, I assume that every quantum system has both an "inside" and an "outside", and that consciousness in humans as well as in other sentient beings is identical to the inner experience of some quantum system. A quantum system's outside behavior is described by quantum theory, its inside experience is the ...

reaction. Modern physics evolved from Newton's laws of motion and force concept and tries to account for everything with linear mathematics. without any regard for a holistic physics of systems. Four hundred years ago particles were inconceivable and atoms were a vague concept.

Holistic Physics in a Self-Organizing Universe

Holistic physics originated out of the proposition that particles have a system that is consistent with a general structural order for a hierarchy of matter. The discovery of this system cannot be arrived at through the analytical method, since the properties of a system do not exist in the constituents, but are created in its formation.

This paper is based on talks given at the 1st International Workshop on Holism in the Philosophy of Physics held at Bonn on 4-5 July 2003 and at the 12th UK Conference on the Foundations of Physics held at Leeds on 2-5 September 2003.

Holism, Physical Theories and Quantum Mechanics

Holistic physics complements dynamics in defining physical reality. 1. The Dichotomy There is a dichotomy in nature over which scientists and phi-losophers stumble. Everything is composed of parts, while at the same time is a part of something larger. An object, therefore, can

The essence of physics is the construction of mathematical models of aspects of the real world. The models contain formal definitions of "elementary systems" and descriptions of how these systems evolve under various conditions. These predictions are then compared with experiments-- typically scattering data.

Theory vs. Experiment: A Holistic Philosophy of Physics

to physics: "It is a wonderful feeling to recognize the unity of a complex of appearances which, to direct sense experiences, appear to be quite separate things." His theories on Brownian motion, quantum property of light and relativity form the foundation of modern physics and other natural sciences.

Holism and Nonseparability in Physics First published Thu Jul 22, 1999; substantive revision Tue Jan 5, 2016 It has sometimes been suggested that quantum phenomena exhibit a characteristic holism or nonseparability, and that this distinguishes quantum from classical physics.

Holistic health care can only be interpreted in relation to an individual's perception of holism. This discussion asks that thought be given to what we perceive as reality, and where "whole" begins and/or ends, using a brief, simple review of quantum theory as the basis for the discussion.
