Hydraulic fracturing (also fracking, fraccing, frac'ing, hydrofracturing or hydrofracking) is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock ...

Directional drilling (or slant drilling) is the practice of drilling non-vertical wells. It can be broken down into four main groups: oilfield directional drilling, utility installation directional drilling (horizontal directional drilling), directional boring, and surface in seam (SIS), which horizontally intersects a vertical well target to extract coal bed methane

Memorandum of Understanding between the State of New Mexico and EPA. In July of 2018, EPA and the State of New Mexico entered into a Memorandum of Understanding (MOU) to clarify the existing regulatory and permitting frameworks related to the way produced water from oil and gas extraction activities can be reused, recycled, and renewed for other purposes.

Case Study - North Carolina. A definitive case study confirming the benefits of preventive water well maintenance. For the past 15 years, Aqua Gard has been successful in keeping wells operating within a +/-10% margin of the peak production and specific capacity following a successful rehabilitation.

Hydraulic fracturing and horizontal drilling are safely unlocking vast U.S. reserves of oil and natural gas found in shale and other tight-rock formations. Developing energy from shale is an advanced process that uses the latest drilling technologies and equipment. As for what fracking means to the United States "the answers are security, economic growth and jobs, jobs, jobs.

1. Permeability - is the ability of the rock to allow fluid movement through its interconnected pores. For reservoir analysis, the following terms are derived from permeability: a. effective permeability - is determined for a given fluid at a saturation less than 100 percent and is the fluid conductivity of the porous media at a given saturation where other fluids
