The Linux kernel is a free and open-source, monolithic, Unix-like operating system kernel. The Linux family of operating systems is based on this kernel and deployed on both traditional computer systems such as personal computers and servers, usually in the form of Linux distributions, and on various embedded devices such as routers, wireless access points, PBXes, set-top boxes, FTA receivers ...

The Linux API is the kernel's "user space API, which allows programs in user space to access system resources and services of the Linux kernel. It is composed out of the System Call Interface of the Linux kernel and the subroutines in the GNU C Library (glibc). The focus of the development of the Linux API has been to provide the usable features of the specifications defined in POSIX in a way ...

General The Linux networking kernel code (including network device drivers) is a large part of the Linux kernel code. Scope: We will not deal with wireless, IPv6, and multicasting. Also not with user space routing daemons/apps, and with security attacks (like DoS, spoofing, etc.) . Understanding a packet walkthrough in the kernel is a key to

Introduction. In this series of articles I describe how you can write a Linux kernel module for an embedded Linux device. I begin with a straightforward "Hello World" loadable kernel module (LKM) and work towards developing a module that can control GPIOs on an embedded Linux device (such as the BeagleBone) through the use of IRQs.
