The classification of glomerulonephritis in systemic lupus erythematosus revisited. The currently used classification reflects our understanding of the pathogenesis of the various forms of lupus nephritis, but clinicopathologic studies have revealed the need for improved categorization and terminology.

### **The classification of glomerulonephritis in systemic lupus**

**INTRODUCTION.** Systemic lupus erythematosus (SLE) is a chronic inflammatory autoimmune disease that affects multiple organs, of unknown cause, characterized by the presence of several autoantibodies.

### **Menstrual disturbances in systemic lupus erythematosus**

**Abstract.** A network of disorders and disease genes linked by known disorder-gene associations offers a platform to explore in a single graph-theoretic framework all known phenotype and disease gene associations, indicating the common genetic origin of many diseases.

Face. Shingles may have additional symptoms, depending on the dermatome involved. The trigeminal nerve is the most commonly involved nerve, of which the ophthalmic division is the most commonly involved branch. When the virus is reactivated in this nerve branch it is termed zoster ophthalmicus. The skin of the forehead, upper eyelid and orbit of the eye may be involved.
