

### **trojans worms and spyware pdf**

Viruses, worms, Trojans, and bots are all part of a class of software called "malware." Malware is short for "malicious software," also known as malicious code or "malcode." It is code or software that is specifically designed to damage, disrupt, steal, or in general inflict some other "bad" or ...

### **What Is the Difference: Viruses, Worms, Trojans, and Bots**

In computing, a Trojan horse, or Trojan, is any malicious computer program which misleads users of its true intent. The term is derived from the Ancient Greek story of the deceptive wooden horse that led to the fall of the city of Troy.. Trojans are generally spread by some form of social engineering, for example where a user is duped into executing an e-mail attachment disguised to appear not ...

### **Trojan horse (computing) - Wikipedia**

Malware (a portmanteau for malicious software) is any software intentionally designed to cause damage to a computer, server, client, or computer network. Malware does the damage after it is implanted or introduced in some way into a target's computer and can take the form of executable code, scripts, active content, and other software. The code is described as computer viruses, worms, Trojan ...

Site Announcements. Virus Alert: There are several Windows e-mail worms currently making the rounds (such as W32.Mimail) which forge the mail's originating address. If you receive an e-mail with an attachment that appears to come from cexx.org, do not open it! It is a worm. We do not send e-mail attachments unless they are specifically requested.

Un cheval de Troie (Trojan horse en anglais) est un type de logiciel malveillant, qui ne doit pas être confondu avec les virus ou autres parasites. Le cheval de Troie est un logiciel en apparence légitime, mais qui contient une fonctionnalité malveillante. Le rôle du cheval de Troie est de faire entrer ce parasite sur l'ordinateur et de l'y installer à l'insu de l'utilisateur.
