where POL=the level of pollution, and Z is a vector of non-economic determinants of pollution levels. Per capita income (Y) is included to allow for possible effects on pollution aside from those mediated by power inequality. In the absence of direct measures of power inequality, we use variables drawn from the right-hand side of Eq.(1) as proxies for  $\beta$ .

The world is experiencing a historically unprecedented transition from predominantly rural to urban living. In 1950, one-third of the world's population lived in cities; today the number has already reached more than one-half, and in 2050 city dwellers are expected to account for more than two-thirds of the world's population (see Figure 2.1).<sup>4</sup>

With 189 member countries, staff from more than 170 countries, and offices in over 130 locations, the World Bank Group is a unique global partnership: five institutions working for sustainable solutions that reduce poverty and build shared prosperity in developing countries.

### **About - World Bank**

Food systems are being transformed at an unprecedented rate as a result of global economic and social change. Urbanization, foreign direct investment in markets of developing countries and increasing incomes are prime facilitators for the observed changes, while social changes, such as the increased number of

women in the workforce and rural to urban migration, provide added stimulus.
